Command Verb Summary

<i>verb phrase</i>	<i>discrete</i>	<i>comment</i>
arm	yes	A prerequisite command for a potentially hazardous command.
close	yes	Mechanically close a device controlled by the command element. <i>close</i> works in conjunction with the <i>open</i> verb.
disable	yes	Deactivate a capability or function. <i>disable</i> works in conjunction with the <i>enable</i> verb.
dump	no	Copy a specific data buffer of the command element to telemetry.
enable	yes	Activate a capability or function. <i>enable</i> works in conjunction with the <i>disable</i> verb.
inform	no	Inform an object of some current data.
init	no	Begin a software function with an initial paramter. <i>init</i> works in conjunction with the <i>term</i> verb.
issue	yes	Send a telemetry packet.
move	no	Move a machanical object from one position to another.
noop	yes	Instruct the command element to perform no operation or 'do nothing'. <i>noop</i> commands are typically used to verify a command path without disturbing configuration.
observe	no	Science observation sequencing command.
open	yes	Mechanically open a device controlled by the command element. <i>open</i> works in conjunction with the <i>close</i> verb.

A. COMMAND VERB SUMMARY

<i>verb phrase</i>	<i>discrete</i>	<i>comment</i>
pass	yes	Pass subfield data unmodified to a secondary hardware or software command receiver.
safe	yes	Configure a device to a safe state. <i>safe</i> works in conjunction with the <i>wake</i> verb.
select	yes	Select one of multiple discrete positions or modes.
set	no	Vary a continuous range parameter.
stuff	no	Load a given data set into memory at a given location.
suspend	yes	Pause command interpretation until an event occurs.
term	yes	End a software function. <i>term</i> works in conjunction with the <i>init</i> verb.
turn off	yes	Remove power from, or deactivate a device. <i>turn off</i> works in conjunction with the <i>turn on</i> verb.
turn on	yes	Apply power to, or activate a device. <i>turn on</i> works in conjunction with the <i>turn off</i> verb.
wake	yes	Wake the hardware from a safe state. <i>wake</i> works in conjunction with the <i>safe</i> verb.

B

Command List

OASIS-CC/FSW database version TBD, Wed Feb 14 14:59:10 2007.

B.1 inform inst acs_state

Packet Target Application Identifier

inst, 0x15e, (350)

Description

Spacecraft ACS status update command.

Discussion

Inform the instruments of the current spacecraft attitude control subsystem (ACS) status.

Constraints

This command does not directly command or reconfigure science instruments. Though each instrument is programmable to respond to different ACS status values under multiple conditions.

Command Target

software

Format

opcode		subfield(s)															
0	7	8	15	16	79	80	111	112	143	144	207	208	271	272	335	336	447

Command size = 448 bits = 56 bytes.

Subfield(s)

filler_1: Filler data to match OSC command structure.

bits	type	eng units	min (dn)	max (dn)	state	value
8	unsigned integer	any	0	0	default	0

filler_2: Filler data to match OSC command structure.

bits	type	eng units	min (dn)	max (dn)	state	value
64	unsigned integer	any	0	0	default	0

seconds: Seconds field of timestamp.

bits	type	eng units	min (dn)	max (dn)	state	value
32	unsigned integer	any	0	4294967295	default	0

subseconds: Fractional part of timestamp.

bits	type	eng units	min (dn)	max (dn)	state	value
32	unsigned integer	any	0	4294967295	default	0

sc_to_sun_u_x: Spacecraft to sun unit vector, spacecraft body frame, cartesian x coordinate.

bits	type	eng units	min (dn)	max (dn)	state	value
64	float	any	0	0	default	0

sc_to_sun_u_y: Spacecraft to sun unit vector, spacecraft body frame, cartesian y coordinate.

bits	type	eng units	min (dn)	max (dn)	state	value
64	float	any	0	0	default	0

sc_to_sun_u_z: Spacecraft to sun unit vector, spacecraft body frame, cartesian z coordinate.

Safety Level

SAFE

Telemetry Verification

B.2 inform inst sc_clock

Packet Target Application Identifier

inst, 0x15d, (349)

Description

Notify FSW of spacecraft time at next time sync.

Discussion

Notify FSW of the spacecraft clock time at the next sync mode code upon the 1553 bus.

Constraints

By itself, this command will not set the instrument propagated spacecraft clock. To set the clock, this command must be followed by a MIL-STD-1553 SYNC mode code within TBD seconds.

An incorrect value of spacecraft clock can seriously degrade instrument command sequencing and the resulting collection of science data.

Command Target

software

Format

opcode		subfield(s)					
0xfc	reserved	seconds	subseconds				
bit 0	7	8	15	16	47	48	79

Command size = 80 bits = 10 bytes.

Subfield(s)

reserved: Pad for even command length.

bits	type	eng units	min (dn)	max (dn)	state	value
8	unsigned integer	any	0	255	default	0

seconds: Integral seconds portion of spacecraft clock.

bits	type	eng units	min (dn)	max (dn)	state	value
32	unsigned integer	any	0	4294967295	default	0

subseconds: Integral subseconds portion of spacecraft clock.

bits	type	eng units	min (dn)	max (dn)	state	value

B.3 arm sofie cover_rls

Packet Target Application Identifier

sofie, 0x180, (384)

Description

Arm Dust Cover Release

Discussion

Arms the aperture dust cover release mechanism.

Valid parameters are:

1 = pinpuller 1A,

2 = pinpuller 1B,
 3 = pinpuller 2A,
 4 = pinpuller 2B

Constraints

Dust cover commands can only be executed in Safe Mode. If the C&DH is not in Safe Mode an Invalid Mode error will be generated and the command will be ignored. If the dust cover is not released within 10 seconds of being armed, a dust cover timeout error message will be issued and the dust cover arm and release will be reset. If this timeout occurs the dust cover arm and release sequence will need to be restarted.

Command Target

sofie

B.4 dump sofie cdh_sram1

Packet Target Application Identifier

sofie, 0x183, (387)

Description

C&DH Data (Operand) SRAM Memory Dump

Discussion

Returns a block of up to 467 words of C&DH Data SRAM contents. The data dump is preceded by a header which includes C&DH data SRAM memory dump opcode, OD address of the dump (or 0xFFFF if lower SRAM), start address within the memory bank, and length of the requested data.

Constraints

The C&DH Self Test and Diagnostics Handler passes this command to the C&DH Memory Dump Queue. If a requested data dump has a length past the end of the bank, then the dump wraps around to the beginning of the bank and continues getting data from there. If the lower SRAM flag is TRUE then lower SRAM is transferred, otherwise upper SRAM data is transferred (OD address 0). A memory dump of SRAM is limited in size to what will fit in the

1553 telemetry buffer. This value is 15 messages * 32 words - 7 word CCSDS header - 2 word checksum - 4 words of dump header = 467 words. If the requested size is larger than this then the dump is truncated to the maximum allowable size and an X44_CDH_DATA_DUMP_REQUEST_SIZE_TRUNCATED error (with requested length in additional error data field) is generated. If lower SRAM is being dumped then 0xFFFF is used as the OD address in the dump header.

Command Target

sofie

Format

opcode		subfield(s)					
0xbba7		lwr_sram_flag	address	length

B.6 dump sofie eeprom

Packet Target Application Identifier

sofie, 0x183, (387)

Description

EEPROM Memory Dump

Discussion

Returns a block of up to 467 words of EEPROM contents. The EEPROM data is preceded by a header which includes the EEPROM memory dump opcode, OD address of the EEPROM bank, start address within the EEPROM bank, and length of the requested data.

Constraints

The C&DH Self Test and Diagnostics Handler passes this command to the C&DH Memory Dump Queue. If a requested EEPROM dump has a length past the end of the bank, then the dump wraps around to the beginning of the bank and continues getting data from there. A memory dump of EEPROM is limited in size to what will fit in the 1553 telemetry buffer. This value is 15 messages * 32 words - 7 word CCSDS header - 2 word checksum - 4 word dump header = 467 words. If the request is larger than this the dump is truncated to the maximum allowable size and

an X44_EEPROM_DUMP_REQUEST_SIZE_TRUNCATED error (with requested length in additional error data field) is generated. If the data cannot be read from EEPROM an X44_EEPROM_DUMP_UNABLE_TO_COPY_DATA error (with command opcode in additional error data field) is generated.

Command Target

sofie

Format

B.7 dump sofie ssb_sram1

Packet Target Application Identifier

sofie, 0x183, (387)

Description

SS&SM Data (Operand) SRAM Memory Dump

Discussion

Returns a block of up to 256 words of SSB Data SRAM contents. The SSB data dump is preceded by a header which includes SSB data memory dump opcode, OD address of the dump (or 0xFFFF if lower SRAM), start address within the memory bank, and length of the requested data.

Constraints

If a requested data dump has a length past the end of the bank, then the dump wraps around to the beginning of the bank and continues getting data from there. If the lower SRAM flag is TRUE then lower SRAM is transferred, otherwise upper SRAM data is transferred (OD address 0). Due to data transfer constraints a sun sensor board (SSB) data dump is

limited to 256 data words. If the requested size is larger than this then the dump is truncated to the maximum allowable size and an X84_SSB_DATA_DUMP_REQUEST_SIZE_TRUNCATED error (with requested length in additional error data field) is generated.

Get Next Event Information

Discussion

Returns information specific to the next event in the science event table and general information about the entire science event table. This command returns the get next event opcode, start event number in the science event table, ending event number, next event number (should always be the same as the start event number), absolute start time for the next event, and event command table number for the next event. This information is returned in the system data packet.

Constraints

If the science event table has not been setup then this command will return all zeroes (other than the command opcode) in the system data packet.

B.29 get sofie sunimage1

Packet Target Application Identifier

sofie, 0x180, (384)

Description

Capture and download a sun image

Discussion

The actual sun sensor image dump packets are preceded by a command response dump packet which includes the get_sunimage1 opcode and an echo of each of the parameters used in the get sun image request.

Constraints

This command can be issued from any SSB Mode but the image will ONLY be downloaded when the SSB is in Standby Mode. This command does the following:

1. Writes Sun Sensor image capture setup parameters to the correct SSB FPGA registers. It is the operators responsibility to assure that the setup parameter values are correct.
2. Writes Sun Sensor image capture information to the SSB Data SRAM that is used by the SSB Interrupt and Task Manager to download the Sun Sensor image. It is the operators responsibility to assure that the image capture information are correct.
3. Writes a value to a FPGA register to start a Sun Sensor image capture.
4. Echoes the command by writing the command to the SSB Data Queue.

The command is echoed so that the Ground Support Software can decode the image as it is downloaded. Note that the image is actually downloaded by the SSB Interrupt and Task Manager. The SSB Interrupt and Task Manger times calls to the SSB data dump command so that there are no overflows in the data transfer queues.

Command Target

B.45 pass sofie ss_aztable

Packet Target Application Identifier

sofie, 0x180, (384)

Description

Upload Sun Sensor Azimuth Table

Discussion

Transmit the sun sensor azimuth table from the C&DH board to the sun sensor board. This opcode can be used in two distinct ways. Either as a direct real-time command or autonomously as part of the science event processor. Normally the sun sensor azimuth table should be transferred by the science event processor as part of event processing. This ensures that the checksum for the event table (which includes the azimuth table) is checked before the azimuth table is transferred.

Constraints

This command enables the C&DH EEPROMs and then calls the blockCopyIO2S function to transmit a Sun Sensor AZ table from the C&DH EEPROM to the Sun Sensor Board. It then disables the C&DH EEPROMs. If this opcode is used as part of the normal event processing then the following errors may be generated: If the requested event command table number is outside of the allowable range (1 to 63) then an X4D_STATE_1_EVENT_TABLE_NUMBER_OUTSIDE_RANGE error is generated. The errant event table number is returned in the additional error information word. If the table cannot be read from EEPROM then an X4D_UNABLE_TO_READ_EVT_AZ_ENTRIES error will be generated. The status from the read_eeprom function is returned in the additional error information word. If the RS422 buffer (used to transmit the table to the sun sensor board) is full two retries will be used to send the azimuth table. If it can't be transmitted after three tries an X4D_UNABLE_TO_SEND_AZ_TABLE_Q_FULL error is generated with the table number returned in the additional error info. If some other comm. error occurs an X4D_UNABLE_TO_SEND_AZ_TABLE error is generated with the table number in the additional error info.

Command Target

sofie

Format

Description

Upload Sun Sensor Elevation Table

Discussion

Transmit the sun sensor elevation table from the C&DH board to the sun sensor board. This opcode can be used in two distinct ways. Either as a direct real-time command or autonomously as part of the science event processor. Normally the sun sensor elevation table should be transferred by the science event processor as part of event processing. This ensures that the checksum for the event table (which includes the elevation table) is checked before the elevation table is transferred.

Constraints

This command enables the C&DH EEPROMs and then calls the blockCopyIO2S function to transmit a Sun Sensor EL table from the C&DH EEPROM to the Sun Sensor Board. It then disables the C&DH EEPROMs. If this opcode is used as part of the normal event processing then the following errors may be generated: If the requested event command table number is outside of the allowable range (1 to 63) then an X4D_STATE_2_EVENT_TABLE_NUMBER_OUTSIDE_RANGE error is generated. The errant event table number is returned in the additional error information word. If the table cannot be read from EEPROM then an X4D_UNABLE_TO_READ_EVT_EL_ENTRIES error will be generated. The status from the read_eeprom function is returned in the additional error information word. If the RS422 buffer (used to transmit the table to the sun sensor board) is full two retries will be used to send the elevation table. If it can't be transmitted after three tries an X4D_UNABLE_TO_SEND_EL_TABLE_Q_FULL error is generated with the table number

returned in the additional error info. If some other comm. error occurs an X4D_UNABLE_TO_SEND_EL_TABLE error is generated with the table number in the additional error info.

B.50 release sofie cover_rl

Packet Target Application Identifier

sofie, 0x180, (384)

Description

Fire Dust Cover Release

Discussion

Fires the aperture dust cover release mechanism. Valid parameters are:

- 1 = pinpuller 1A,
- 2 = pinpuller 1B,
- 3 = pinpuller 2A,
- 4 = pinpuller 2B

Constraints

Dust cover commands can only be executed in Safe Mode. If the C&DH is not in Safe Mode an Invalid Mode error will be generated and the command will be ignored. In order for the dust cover to be released it has to be armed. If the dust cover is not armed a Dust Cover Not Armed error message will be issued and the dust cover will not be released. If the dust cover is not released within 10 seconds of being armed, a dust cover timeout error message will be issued and the dust cover arm and release will be reset. If this timeout occurs the dust cover arm and release sequence will need to be restarted.

Telemetry Verification**B.69 select sofie science****Packet Target Application Identifier**

sofie, 0x180, (384)

Description

Transition to Science Mode

Constraints

The C&DH board can not transition from Safe Mode to Science Mode. If the C&DH board is in Safe mode an Invalid Mode error will be generated and the command will be ignored. If the C&DH is not in Safe Mode this command immediately places the C&DH board in Science Mode.

Command Target

sofie

Format

bit	0 15	

Subfield(s)**Safety Level**

SAFE

Telemetry Verification**B.71 select sofie ssb_quiet****Packet Target Application Identifier**

sofie, 0x180, (384)

Description

SSB Quiet Mode

Discussion

This command is used to synchronize the C&DH and SSB Free Running Timers. It places the SSB into a high speed polling mode which empties the SSB command queues and allows the SSB to respond as quickly as possible to a time synchronization message.

Constraints

This command is a SOFIE internal command and is not intended to be issued from the ground.

sofie, 0x180, (384)

Description

Setup Science Event Table

Discussion

Initialize the science event table with 256 event entries. The first event number in the table is determined by the supplied parameter. Upon completion of this command, the command opcode and start event number are returned in the free format section of the system data packet.

Constraints

This command calls the csc07SEPSetupScienceEventTable function with the operator supplied event number. If this command is not used before the first set_sunset_event or set_sunris_event command then the table is initialized using the event number from the set_sunset_event or set_sunris_event command. The start event number is any unsigned sixteen bit integer.

Telemetry Verification**B.128 set sofie sunris_event****Packet Target Application Identifier**

sofie, 0x180, (384)

Description

Set Sunrise Event

Discussion

Set the absolute start time and event command table number for the requested event number. If the science event table has not previously been initialized then this function will call `csc07SEPSSetupScienceEventTable` to initialize the table. The requested event number for this command will be used as the starting event number in the table. The functions used for this command are identical to those used for Set Sunset Event. If this command successfully updates the event start time and table number it returns the `set_sunris_event` opcode, event number, event start time and event command table number in the system data packet.

Constraints

If the science event table has not been initialized before this command is executed then an `X4D_WARNING_EVENT_TABLE_NOT_PREV` warning will be generated. The requested event number is returned in the additional error information word. If the event number parameter is less than the range currently held in the event table then an `X4D_EVENT_NUMBER_OUTSIDE_CURRENT_L` error is generated. The requested event number is returned in the additional error information word. If the requested event number is greater than the range currently held in the event table then an `X4D_EVENT_NUMBER_OUTSIDE_CURRENT_RANGE` error is generated. The requested event number is returned in the additional error information word. If the requested event command table number is less than the allowed range (1 to 63) then an `X4D_EVENT_TABLE_NUMBER_OUTSIDE_RANGE_LOV` error is generated. The errant event table number is returned in the additional error information word. If the requested event command table number is greater than the allowed range (1 to 63) then an `X4D_EVENT_TABLE_NUMBER_OUTSIDE_RANGE_H` error is generated. The errant event table number is returned in the additional error information word.

Telemetry Verification**B.131 set sofie sunset_event****Packet Target Application Identifier**

sofie, 0x180, (384)

Description

Set Sunset Event

Discussion

Set the absolute start time and event command table number for the requested event number. If the science event table has not previously been initialized then this function will call `csc07SEPSSetupScienceEventTable` to initialize the table. The requested event number for this command will be used as the starting event number in the table. The functions used for this command are identical to those used for Set Sunrise Event. If this command successfully updates the event start time and table number it returns the `set_sunset_event` opcode, event number, event start time and event command table number in the system data packet.

Constraints

If the science event table has not been initialized before this command is executed then an `X4D_WARNING_EVENT_TABLE_NOT_PREV` warning will be generated. The requested event number is returned in the additional error information word. If the event number parameter is less than the range currently held in the event table then an `X4D_EVENT_NUMBER_OUTSIDE_CURRENT` error is generated. The requested event number is returned in the additional error information word. If the requested event number is greater than the range currently held in the event table then an `X4D_EVENT_NUMBER_OUTSIDE_CURRENT_RANGE` error is generated. The requested event number is returned in the additional error information word. If the requested event command table number is less than the allowed range (1 to 63) then an `X4D_EVENT_TABLE_NUMBER_OUTSIDE_RANGE_LOV` error is generated. The errant event table number is returned in the additional error information word. If the requested event command table number is greater than the allowed range (1 to 63) then an `X4D_EVENT_TABLE_NUMBER_OUTSIDE_RANGE_H` error is generated. The errant event table number is returned in the additional error information word.

Description

C&DH Data (Operand) SRAM Pattern Test

Discussion

Diagnostic write/read test for C&DH Data SRAM. Intended to search for bad memory locations.

Constraints

This command writes a specified test pattern to the specified locations in C&DH Data SRAM. It is the operators responsibility to assure that the Start address and Length are valid. Before writing the test pattern the original value is saved into a register. After the test pattern is written and tested the original value is written back to the memory location being tested. This allows the Data SRAM to be tested without destroying the original value. This command generates a single word response = error count. The addresses of up to the first 0x400 memory locations that generated an error will be saved at address B780h and can be downloaded using the dump_cdh_sram1 command. No error code is placed in the error map.

Command Target

sofie

Format

Description

C&DH Instruction SRAM Pattern Test

Discussion

Diagnostic write/read test for C&DH Instruction SRAM. Intended to search for bad memory locations.

Constraints

This command writes a specified test pattern to the specified locations in C&DH Instruction SRAM. IT IS THE OPERATORS RESPONSIBILITY TO ASSURE THAT THE START ADDRESS AND LENGTH ARE VALID AND THAT NO CODE SEGMENT THAT IS CURRENTLY BEING EXECUTED BY THE CPU IS TESTED WITH THIS COMMAND! Before writing the test pattern the original value is saved into a register. After the test pattern is written and tested the original value is written back to the memory location being tested. This allows the instruction SRAM to be tested without destroying the original value. If the operator selects an instruction SRAM segment that does not interfere with code execution causing the watchdog timer to reset the CPU this command will generate a single word response = error count. The addresses of up to the first 0x400 memory locations that generated an error will be saved at address B780h and can be downloaded using the dump_cdh_sram1 command. No error code is placed in the error map.

Shutdown Sun Sensor

Discussion

Prepare SSB for power shutdown.

Constraints

This command does the following:

1. Sends command to SSG board to move the mirror to 0,0.
2. Sends reset command to SSG board to turn off the servos.
3. Places the SSB board in Standby Mode.

Note: It does NOT shutdown the SSB power.

Command Target

sofie

Format

opcode	
0xdd40	Command size = 16 bits = 2 bytes.

bit 0 15

Subfield(s)**Safety Level**

SAFE

Telemetry Verification**B.155 use sofie balance****Packet Target Application Identifier**

sofie, 0x180, (384)

Description

Select balance table to use

Command Target

software

Format

opcode		subfield(s)	
0xbb8a		event_type	

Command size = 32 bits = 4 bytes.

bit 0 15 16 31

Subfield(s)

event_type: Event type 0=sunrise, 1=sunset

bits	type	eng units	min (dn)	max (dn)	state	value
16	unsigned integer				default	

Safety Level

SAFE

Telemetry Verification**B.156 use sofie balanceT****Packet Target Application Identifier**

sofie, 0x181, (385)

Description

Select balance table to use (timed execution)

Command Target

software

Format

opcode		subfield(s)			
0xbb8a		Time	event_type		

Command size = 64 bits = 8 bytes.

bit 0 15 16 47 48 63

Subfield(s)

Time: time of command execution

bits	type	eng units	min (dn)	max (dn)	state	value
32	unsigned integer				default	

event_type: Event type 0=sunrise, 1=sunset

bits	type	eng units	min (dn)	max (dn)	state	value
16	unsigned integer				default	

Safety Level

Telemetry Verification

B.157 use sofie cdh_image

Packet Target Application Identifier

sofie, 0x180, (384)

Description

Specify C&DH code image to load

Discussion

Select which copy of CDH code image to use. One of several code images may be selected by address.

Constraints

Allows user to select any OD address and start address. It is the operators responsibility to assure these values point to a valid code image.

Command Target

sofie

Format

opcode		subfield(s)			
0xbb05	OD_address	start_address			
bit 0 15	16 31	32 47			

Command size = 48 bits = 6 bytes.

Subfield(s)

OD_address: Bank select OD bits for memory address

bits	type	eng units	min (dn)	max (dn)	state	value
16	unsigned integer				default	

start_address: start address of code image

sofie sci (529)

E.445 sofie G_Sum_HY01**Description**

High Y Sum 1, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.446 sofie G_Sum_HY02**Description**

High Y Sum 2, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.447 sofie G_Sum_HY03**Description**

High Y Sum 3, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.448 sofie G_Sum_HY04**Description**

High Y Sum 4, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.449 sofie G_Sum_HY05**Description**

High Y Sum 5, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.450 sofie G_Sum_LX01**Description**

Low X Sum 1, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.451 sofie G_Sum_LX02**Description**

Low X Sum 2, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.452 sofie G_Sum_LX03**Description**

Low X Sum 3, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.453 sofie G_Sum_LX04**Description**

Low X Sum 4, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.454 sofie G_Sum_LX05**Description**

Low X Sum 5, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.455 sofie G_Sum_LX06**Description**

Low X Sum 6, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.456 sofie G_Sum_LX07**Description**

Low X Sum 7, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.457 sofie G_Sum_LY01**Description**

Low Y Sum 1, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.458 sofie G_Sum_LY02**Description**

Low Y Sum 2, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.459 sofie G_Sum_LY03**Description**

Low Y Sum 3, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.460 sofie G_Sum_LY04**Description**

Low Y Sum 4, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.461 sofie G_Sum_LY05**Description**

Low Y Sum 5, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.462 sofie G_TIME_Det**Description**

Timestamp, Detector data, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.463 sofie G_TIME_Pix**Description**

Timestamp, Pixels, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.464 sofie G_TIME_PnS**Description**

Time stamp, Pointing and Stabilization, Observation #7

Data Type

16 bits, signed integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.465 sofie G_TIME_TkA**Description**

Timestamp, Tracking, Observation #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.466 sofie G_TkA_HiX**Description**

High X FPA Coordinates, Observation #7

Data Type

16 bits, signed integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.467 sofie G_TkA_HiY**Description**

High Y FPA Coordinates, Observation #7

Data Type

16 bits, signed integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.468 sofie G_TkA_LwX**Description**

Low X FPA Coordinates, Observation #7

Data Type

16 bits, signed integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.469 sofie G_TkA_LwY**Description**

Low Y FPA Coordinates, Observation #7

Data Type

16 bits, signed integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie sci (529)

E.470 sofie OD_address**Description**

bank select OD bits for memory address

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie test_dump (544)

E.471 sofie atten_setting_1**Description**

Attenuator setting #1

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.472 sofie atten_setting_10**Description**

Attenuator setting #10

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.473 sofie atten_setting_11**Description**

Attenuator setting #11

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.474 sofie atten_setting_12**Description**

Attenuator setting #12

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.475 sofie atten_setting_13**Description**

Attenuator setting #13

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.476 sofie atten_setting_14**Description**

Attenuator setting #14

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.477 sofie atten_setting_15**Description**

Attenuator setting #15

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.478 sofie atten_setting_16**Description**

Attenuator setting #16

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.479 sofie atten_setting_2**Description**

Attenuator setting #2

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.480 sofie atten_setting_3**Description**

Attenuator setting #3

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.481 sofie atten_setting_4**Description**

Attenuator setting #4

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.482 sofie atten_setting_5**Description**

Attenuator setting #5

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.483 sofie atten_setting_6**Description**

Attenuator setting #6

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.484 sofie atten_setting_7**Description**

Attenuator setting #7

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.485 sofie atten_setting_8**Description**

Attenuator setting #8

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.486 sofie atten_setting_9**Description**

Attenuator setting #9

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.487 sofie automat_proc_err**Description**

Automation Processor errors (0x4D)

Data Type

32 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit

Telemetry Source Packets

sofie system_data (540)

E.568 sofie p386lws**Description**

SOFIE reserved 1 secondary header, seconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie system_data (540)

E.569 sofie p386lwss**Description**

SOFIE reserved 1 secondary header, subseconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie system_data (540)

E.570 sofie p386pid**Description**

SOFIE reserved 1 packet header, type and apid

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie system_data (540)

E.571 sofie p386pl**Description**

SOFIE reserved 1 packet header, packet length

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie system_data (540)

E.572 sofie p386sct**Description**

SOFIE reserved 1 packet header, sequence counter

Data Type

14 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie system_data (540)

E.573 sofie p387flg**Description**

SOFIE reserved 2 packet header, segment flags

Data Type

2 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie event_data (524)

E.574 sofie p387hws**Description**

SOFIE reserved 2 secondary header, seconds (high order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie event_data (524)

E.575 sofie p387hwss**Description**

SOFIE reserved 2 secondary header, subseconds (high order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie event_data (524)

E.576 sofie p387lws**Description**

SOFIE reserved 2 secondary header, seconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie event_data (524)

E.577 sofie p387lwss**Description**

SOFIE reserved 2 secondary header, subseconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie event_data (524)

Measurement Source

SOFIE

Telemetry Source Packets

sofie mem_dump (528)

E.585 sofie p388lwss**Description**

SOFIE reserved 3 secondary header, subseconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie mem_dump (528)

E.586 sofie p388pid**Description**

SOFIE reserved 3 packet header, type and apid

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie mem_dump (528)

E.587 sofie p388pl**Description**

SOFIE reserved 3 packet header, packet length

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie mem_dump (528)

E.588 sofie p388sct**Description**

SOFIE reserved 3 packet header, sequence counter

Data Type

14 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie mem_dump (528)

E.589 sofie p389flg**Description**

SOFIE reserved 4 packet header, segment flags

Data Type

2 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.590 sofie p389hws**Description**

SOFIE reserved 4 secondary header, seconds (high order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.591 sofie p389hwss**Description**

SOFIE reserved 4 secondary header, subseconds (high order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.592 sofie p389lws**Description**

SOFIE reserved 4 secondary header, seconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.593 sofie p389lwss**Description**

SOFIE reserved 4 secondary header, subseconds (low order)

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.594 sofie p389pid**Description**

SOFIE reserved 4 packet header, type and apid

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.595 sofie p389pl**Description**

SOFIE reserved 4 packet header, packet length

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.596 sofie p389sct**Description**

SOFIE reserved 4 packet header, sequence counter

Data Type

14 bits, unsigned integer, engineering units = dn.

Measurement Source

SOFIE

Telemetry Source Packets

sofie test_dump (544)

E.597 sofie pkt_filler**Description**

sofie packet filler.

Data Type

7568 bits, character string, engineering units = any.

Measurement Source

software

Discussion

NOTE: This is a NON-FLIGHT ISIM-ONLY telemetry item.

Telemetry Source Packets

sofie event_data (524), sofie mem_dump (528)

E.598 sofie point_stabil_err**Description**

Pointing and Stabilization errors (0x87)

Data Type

32 bits, unsigned integer, engineering units = dn.

Telemetry Source Packets

sofie system_data (540)

E.640 sofie ssb_taskm_stat_4**Description**

20 Hz & 1 Hz interrupt, SSB task manager status

Data Type

2 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.641 sofie ssb_taskm_stat_5**Description**

Error, SSB task manager status

Data Type

4 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.642 sofie ssb_taskm_stat_6**Description**

Timer, SSB task manager status

Data Type

4 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.643 sofie ssb_taskm_stat_7**Description**

Quiet_100Hz, SSB task manager status

Data Type

4 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.644 sofie ssb_taskm_stat_8**Description**

SSB, SSB task manager status

Data Type

2 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.645 sofie ssb_taskm_stat_9**Description**

Int_5_0, SSB task manager status

Data Type

2 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.646 sofie start_address**Description**

start address of data dump

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie test_dump (544)

E.647 sofie steermirror_err**Description**

Steering Mirror Handler errors (0x88)

Data Type

32 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	1
yellow high	1
yellow low	-1
red low	-1
delta	<i>none</i>

Telemetry Source Packets

sofie system_data (540)

E.648 sofie suntrack_err**Description**

Sun Tracking Algorithm errors (0x89)

Data Type

32 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	2
yellow high	1
yellow low	-1
red low	-2
delta	<i>none</i>

Telemetry Source Packets

sofie system_data (540)

E.649 sofie sync_ctrl_reg**Description**

Sync Control Register

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.650 sofie sync_fall_ps_1**Description**

Sync Rectifier #1 Falling Edge Phase Shift

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	65535
yellow high	428
yellow low	408
red low	-65535
delta	<i>none</i>

Telemetry Source Packets

sofie system_data (540)

E.651 sofie sync_fall_ps_10**Description**

Sync Rectifier #10 Falling Edge Phase Shift

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	65535
yellow high	424
yellow low	404
red low	-65535

Telemetry Source Packets

sofie system_data (540)

E.665 sofie sync fall_ps_9**Description**

Sync Rectifier #9 Falling Edge Phase Shift

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	65535
yellow high	423
yellow low	403
red low	-65535
delta	<i>none</i>

Telemetry Source Packets

sofie system_data (540)

E.666 sofie sync_pulse_width1**Description**

Sync Rectifier Pulse Width (microseconds)

Data Type

12 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.667 sofie sync_pulse_width2**Description**

Sync Rectifier Pulse Width (additional 83.33 nsec clock pulses)

Data Type

4 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Telemetry Source Packets

sofie system_data (540)

E.668 sofie sync_rise_ps_1**Description**

Sync Rectifier #1 Rising Edge Phase Shift

Data Type

16 bits, unsigned integer, engineering units = dn.

Measurement Source

sofie

Limits

alarm	limit
red high	65535
yellow high	344
yellow low	324
red low	-65535
delta	<i>none</i>

F

Telemetry Packet List

OASIS-CC/FSW database version TBD, Wed Feb 14 14:59:11 2007.

F.1 sofie event_data

Packet Source Application Identifier

0x183 (387)

OASIS Stream Name

sofie387

Description

sofie reserved packet.

Discussion

SOFIE event data packet. Default Packet Production Status: Packets produced asynchronously on command.

Format

Packet **sofie event_data** Format

start bit	stop bit	size bits	field	control	method
0	15	16	sofie p387pid (424)	–	–
16	17	2	sofie p387flg (422)	–	–

96	111	16	sofie p387lwss (424)	–	–
112	7679	7568	sofie pkt.filler (430)	–	–

Packet size = 7680 bits (960 bytes) .

F.2 sofie hk

Packet Source Application Identifier

0x180 (384)

OASIS Stream Name

sofie384

Description

sofie housekeeping.

Discussion

SOFIE software status: state, counters, etc and hardware housekeeping values: temperatures, voltages, etc..

Default Packet Production Status:

Packets produced every TBS seconds.

Format

Packet **sofie hk** Format

Packet size = 1696 bits (212 bytes) .

F.3 sofie mem_dump

Packet Source Application Identifier

0x184 (388)

OASIS Stream Name

sofie388

Description

sofie memory dump packet.

Discussion

SOFIE memory dump packet.

Default Packet Production Status:

Packets produced asynchronously on command.

Format

Packet **sofie mem_dump** Format

start bit	stop bit	size bits	field	control	method
0	15	16	sofie p388pid (427)	–	–
16	17	2	sofie p388flg (425)	–	–

96	111	16	sofie p388lwss (426)	–	–
112	7679	7568	sofie pkt_filler (430)	–	–

Packet size = 7680 bits (960 bytes) .

F.4 sofie sci

Packet Source Application Identifier

0x181 (385)

OASIS Stream Name

sofie385

Description

sofie science packet.

Discussion

Contains SOFIE science detector data and corresponding instrument configuration.

Default Packet Production Status:

Enabled and produced synchronously after enough SOFIE cycles have completed such that the packet is full.

Format

Packet **sofie sci** Format

G. TELEMETRY PACKET SUMMARY

H

Glossary

ACS *Attitude Control Subsystem* Spacecraft subsystem responsible for spacecraft and instrument pointing.

ADC *analog/digital converter*

Aeronomy of Ice in the Mesosphere NASA mission to study the formation, morphology, and life cycle of polar mesospheric clouds (PMCs). These clouds are also called noctilucent due to their tendency to 'glow' during the polar winter months. These clouds are so high in the atmosphere that their under sides (sides facing the earth) are illuminated by sunshine passing across the pole through the atmosphere from the daylight side of the Earth.

B *byte* See byte

b *bit* See bit.

bit Basic unit of information storage.

BOS *bright object sensor* Hardware for sensing presence of bright objects (such as the sun).

byte 8 bits of storage. CCSDS uses the term *octet* instead.

CCSDS *Consultative Committee for Space Data Systems* An **international organization** of space agencies interested in mutually developing standard data handling techniques.

CDE *Cosmic Dust Experiment* One of the instruments comprising the AIM observatory, the CDE instrument helps scientists determine the amount of particles entering the atmosphere. This in turn helps them determine the impact of cosmic dust on PMC formation.

C&DH *command and data handling* Spacecraft subsystem that receives and processes commands, and produces telemetry. Typically the CDH also contains the flight computer.

CIPS *Cloud Imaging and Particle Size* One of the instruments comprising the AIM observatory, the CIPS instrument uses six CCDs to capture greyscale images of PMCs. These images will help scientists determine how these clouds are created, how they change over time, and what constitutes them.

CM *configuration management* Process of controlling access, identifying and archiving designated releases of software and documentation. CM is complementary to a version control system. See CVS.

command An instruction from a user (or script) to a spacecraft system to perform a specific action.

FSW *flight software* Embedded software that controls flight hardware.

glossary This is it.

H. GLOSSARY

high level command An instrument command that implements functionality of more than one low level command. High level commands are more efficient than low level commands for specifying complex instrument behavior.

HVPS *high voltage power supply* Device designed to provide unusually high voltages to electronics. Such devices are not only a safety hazard, but also can be hazardous to other hardware, should they arc, which is only a danger at low ambient pressures.

I/O *input output*

KB *kilobyte* $2^{10} = 1024$ bytes.

Kb *kilobit* $2^{10} = 1024$ bits.

LASP *Laboratory for Atmospheric and Space Physics* Institute at the [University of Colorado, Boulder](#), researching atmospheric, space and planetary physics.

low level command An instrument command that implements a single basic hardware or software function.

MB *megabyte* $2^{20} = 1,048,576$ bytes.

Mb *megabit* $2^{20} = 1,048,576$ bits.

ms *milliseconds*

MIL-STD-1553 Military standard for flight serial data bus.

octet CCSDS term for an 8-bit unit of storage. See byte.

PDF *portable document format* Binary document format with self contained fonts that can be viewed or printed from most any platform via [Adobe Acrobat](#) and other PDF viewers. Advanced PDF viewers can navigate hyperlinks to other locations within and external to the document.

POR *power on reset* Hardware reset due to power cycle (transition from off to on). Hardware and software return to their POR states after a POR.

SSI *Standard Serial Interface* Interface electronics used for loading, monitoring, and debugging FSW.

TC *telecommand* CCSDS term for command. See CCSDS.

telemetry Data produced by a spacecraft application.

UT69R See UT69R000.

UT69R000 A radiation-hardened 16-bit RISC microcontroller created by UTMC. The 69R000 is the microcontroller host for FSW on all AIM instruments.

End of glossary.
